Hey, i was woundering about the posibility of shapeways eventually getting a cutting/milling machine setup such as a laser or liquid jet cutter. This would expand what people could do scale wise.

This could let people design furniture, heck even new/replacement parts made of metal, ranging from cars, robotics, to even house utilities.

I just though that this would be a neat company expansion idea, since not everything ive seen on shapeways would be practical at the CM/MM scale.

Interesting idea!

We currently focus on 3D printing. But who knows what the future will bring?

I forwarded it to Marketing.

Best regards,

Robert
