I would like to have a silver pendant made of a miniature copy of a rock which a dear friend gave to me. The rock is peculiar. It has a face and looks like it could be blowing a kiss. I've attached an image. The rock is about 5 " in height, but I would like the miniature to be 3/4 " in height. I have no idea how to proceed with this. I contacted a several artists locally, none of whom were equipped for this kind of project.

Send me a 6 sided shot (front right back left top and bottom) on a plain background, and I'll see what I can do.
