So, a BIG box from Shapeways today!

A test print of my Cosmographic Mystery model " shall we say a qualified failure. Not as bad as it might have been.

A print of my hollowed sixty-sided die at 3cm " a rousing success!

A print of my Wireframe Sphericon " Also successful

A copy of Mchlhtn's Inner Die, quite nice.

And a little mini armbone from Karmabomb " I just keep thinking of this picture

(Oh, and a quarter for scale. Still US-centric, will work on that)

A nice enough haul. The Cosmographic Mystery is somewhat warped and too floppy, but only on the very outer parts. A little extra support for those (and a stand) and it should be quite serviceable, though whether or not anyone would buy one is still an open question. But it deserves to exist.

Hello,
Thank you for being my first customer! It is exciting to actually find out who purchased my work. How do you like it? If you don't mind me asking, what made you want to buy it?

Best regards,

Kris Rekers

What is the diameter of the tubes in the Cosmographic Mystery model? That information would be important for future projects using long wires.
