Hello,

The knots I am working on can easily be scaled up. Should I make a model for each size (sm., md, and large.)?

Hi mattm1080,

I'm not really sure what you're asking. Is this a Co-Creator specific question, or 3D in general?

I think I know what he means.

I have a model that is 12cc+2.4cc per letter. Currently to keep costs down I would have to define each possible length as a different co create model instead of 1 model that auto changed the price based on the length of the users input field.

Ah, ok.

Yes, with our current pricing model you can only enter one price for a co-creator. If you want to

offer substantially larger or smaller objects this price would be way off and you should create separate models.

Cheers,

Bart
