Hi,

I just received prints in WSF. they are from models i had previously had printed in WSF. They were sized to fit in the limits of that printer an I know there was only one way it would fit in it. Though the new prints i got are not printed in the same orientation and the quality of the print is not as good as the first print i had. So I conclude that they were printed on the new big WSF printer, which, if i understood well does have a 0,5 instead of 0,2 mm minimum detail.

am I right?

someone else had that issue?

and to shapeways team: can you explain

thanks
