Hi guys,

I'm from Ontario Canada.

I build Models of Starships for a miniature game called a Sky Full of Ships. I started in CGI by getting a hold of a friend's copy of Lightwave 7.5 and doing some CGI art for the A sky Full of Ships rulebook about 7 years ago.

I got a plug-in for Lightwave 9 that exports .stl so i figured I'd take a shot at shapeways. I also plan to use Shapeways for 1 off items for my model building, starting with the wheels for a 1/56th WW2 French Laffly S-20 truck.

Cheers,

Steve

Welcome to you both !!!

Feel free to ask questions and share your designs in the 'It arrived' forum.

cheers

Duann

Haha

One got to admire a place that even welcomes spammers

The smarty-pants spammers often first add the post looking like a normal message without obvious spam links, then sometime later the messages are edited and the links are added.

Cheers!
