Thought I would introduce myself; my name is Gerald and have been in the "3D world" for about 15 years. Have not done anything too complicated in scale or anything story driven. I am a designer for a P.E firm and have been for about 11 years. I have been using CAD based programs for about 20 years, so the 3d stuff pretty much goes hand in hand.

I have uploaded a couple simple items to see how things work around here, so far so good. I did a test video also.

Let me know what you think.

Gerald,

Very nice start. Have you been through the material specifications to make sure your items are printable? Some of them look pretty small. <http://www.shapeways.com/materials/>

Hope to see some prints in the "It Arrived" section soon!

Thanks for the link. I did have an original tank that was pretty small. I had ordered it to get printed and was rejected but for some reason I just received it in a delivery yesterday. I took some pictures and will post in the appropriate section. I will try to keep things thicker than a 1/16" if in the tough stuff and thicker for the lighter materials.
