
Subject: Model is different size in Inventor and Shapeways

Hi, I'm new and just trying to upload a cube that should be an inch wide. In inventor it is 1 unit wide and when I upload it I select "inches" when prompted. But the result is 2.5 inches. The same problem happens when I modeled one 18mm wide (I selected "mm") but it became 46mm (which happens to be 1.8 inches). What am I doing wrong?
