Hi all

I am new to this new technology of modeling and 3d printing and hope that I will be able to do what I set out to achieve.

I am looking to produce (with the help of an expert) a watch part and hopefully it wont be too much hassle (or money) to get started. More details of my project to follow.

Regards

Andy

Welcome Andy

What kind of watch part? I've been contemplating making a watch (minus the movement, bought separately) for a while. You can always post in the modeler needed section, and helpful Shapies will be there to assist you.

I too have wanted to make my own watch, but for a good eta movement, you are looking at Â£350 which is what goes into the top of the range watches.

Im looking to make a rare part and sell it basically. Its a shroud, but need to see if it is possible.
