Just got my Dodecaball the other day in WSF. I've dropped it from 8 feet, and it's still intact. I'm very impressed by the service from Shapeways and thought I'd show my printed piece off to get peoples opinions on it.

To me it looks like the most awesome structure ever made, or a dog toy.

Hah, the setting of the photos makes me imagine it as some high-tech snowball of the future. Also reminds me of a wiffle ball, but a heck of a lot more fun to look at. :)
