I'm pretty sure you can skip the Blender stage...

Upload the OBJ straight to shapeways - OBJ has all the colors data inside - no need to convert to textures.

I tried that with no luck. On the upload page it doesn't include OBJ for color models. And if it had the color data wouldn't it already have the color when opened in blender?

I tried it now too.. you're right .. i recall Bart said shapeways accepts OBJ but without the colors

data..

Cool guide.

Text is wrong, you mean Blender 2.49 and 2.59. ^_^ The 1.x series is really old.

You are right, I'll have to fix that.

Edit: Fixed Thanks

Nice tutorial.

You might be able to save the 'Blender' time by importing the .obj into Accutrans3D and then export as VRML2.0... Accutrans also has options to scale and more importantly truncate the UV map filename ready for zipping.

More than one way to skin a cat, or a 3D model in this case . This was just the easiest way for me using what I know, and what I was able to get to work.
