Hey guys,

Ceramics are an option in the materials section with its own respective design guidelines. I understand that you need to create a 120mm bounding box about whatever product you intend to create into ceramics, but say I have a ring that is 2.3 cm wide, 0.8 cm high and 2.3cm long, how would I go about getting these printed? Could I just print say 10 in square formation and this count towards a total of 12cm in my bounding box?

In regards to the buying of the material itself, On all the products I have created and even those in the shops online, I CANNOT find the option to print out these items in ceramics... do you have to personally request to use this material?

Any help would be greatly appreciated!

Sixthlaw

Whilst multiple parts are allowed for ceramics, each part must have a bounding box of 120mm minimum. - see tip #3 about half way down; <http://www.shapeways.com/design-rules/ceramics>

Follow the design rules for ceramics and the material is available.
