For the ones using MeshLab I would like to share the link to the recently open MeshLabStuff blog that reports small tutorials, hints and practical examples of stuff done with MeshLab.

Currently there are posts discussing how to clean meshes, how to create pdf with 3D objects embedded and how the voronoi sphere (shown below) was created using MeshLab

.

Cheers

p.

I have just posted on MeshlabStuff the second part of the MeshLab tutorial on how to model the Voronoi sphere

It is a rather general technique that can be applied to almost any kind of surface to get the typical "organic" look (and using only free tools!)

Happy reading!!

Great stuff! but the latest version of Meshlab I can find (1.1.x) doesn't seem to support all used options ?

Would I need to build my own 1.2.0 binary for this ?

---

Regards.

Why is it always after asking that one finds the answers

Stumbled upon the 1.2.x alpha versions here:

<http://meshlab.sourceforge.net/wiki/index.php/Betabuilds>
