Hello all,

My friend converted my logo into a 3D model in AutoCad, however, there are 2 main colors that I needed the logo to be in....

The letters in all white... and...

the Circle/logo part in blue (5 segments, each a different shade).

It's a pretty straightforward logo, but I don't think he is able to export into the needed format (VRML and X3D) for "Full Color Sandstone" material, printing.

Is anyone available for hire to add these color details to my AutoCad file and convert it properly for upload?

Many thanks!

Hi,

I can colour your model for you. I would need the model file and an image of your logo - you can send these via PM.

Cheers,  
Paul
