So, some people were asking me a lot of questions about 3d modeling to make 3d prints, and my photobucket account was utterly destroyed (I had to pay \$3 to upgrade to pro so I could get around the bandwidth limit).

Thus, I decided to make a blog for it. I also realized that there aren't too many blogs that walk people through making models specifically for 3d printing. I'm planning on having tutorials, guides, warnings, and so forth on it. Basically just stuff that I'm learning the hard way or cool things I make.

You can find it at - [Fractured Mesh](#)
