Hi,

I am attempting to make an online tool that uploads models to Shapeways, but the login always fails. Right now, I'm just trying to connect using the demo code from <http://www.shapeways.com/api>

The only change I've made is replacing the username and password with my own. I haven't done any SOAP development before, so I don't know if there is something obvious I'm missing.

Here is the exception I'm getting:

Quote:

```

Hi! nervoussystem,
I'm sure it is because of the recent Shapeways web update.
Since last Friday night, it has not been able to login using API. It's not caused by your computer.

Should be working again now.

Our Sake Set creator uses the same API functions, so if that is working on the site, then the API should be working for everyone.

Thanks for checking, but it seems not working still now.
<http://api.shapeways.com/v1/wsdl.php>
cannot be open.
It says "No local config file found for api.shapeways.com"
Now I'm trying to find an alternative.
