I have been waiting for this to arrive as I already had the very fine Kato 103 4- wheel mechanism to hand.

The small locomotive came in a white tough, flexible, plastic and easily slipped onto the mechanism - instant loco!

There was a slight bowing of the side frames below the foot plate but this was caused by the protrusion of the mech's axle boxes.

Relatively easy to fix.

Now to detail the loco a little and paint, BUT how do you get over the "orange peel" finish first?

Cheers,

ChassoZ
