heya

couple more prints i got

Skul: looks alot more red in real life.....think its due to the exposure on the camera.

there is also a miss print on it (at the bottom) not sure why this is....i have checked the model and its fine.

also have to move the circle framing the apple logo.

fits well and very strong

zurclz: (the second image) was inspired by a design i saw im dubai.

I plan to add a little more girth as it has a bit too much flex.

strangely the circle framing the logo is spot on in this one.

the model is in purple....

regards
