We're really replicating a current design but customized by my bosses specs. We have photos and measurements, with a clear idea of what we want, but need the design to be rendered in 3-D and then printed in a durable plastic. From there, there is most likely changes and back forth to be done. Once satisfied we may produce them in a mass quantity.

This is a paying gig, in case it needs mentioning.

Best bet is to contact me with pricing and turn around time at secretmediagroup@gmail.com

THANKS!
