Hi,

I don't have any experience with 3d-printing or shapeways.

I have successfully uploaded my model, but it's a little bit more expensive than I thought in the colour I want it.

So, can anyone tell me if it's possible to paint the material 'white, strong flexible'? I'd like to paint it grey, because I need a concrete-look.

Kind regards,

Sofie

I haven't done it myself, I know others have. Check out the post production techniques for info.
