Hi,

I've come up with a great idea for a new carrying case that is very specific for what I use it for. I use Wrigley's "Extra Long Lasting Flavor" gum packets to carry some small items around town. What I need now is a stronger packet with the same flexibility. I am brand new to any sort of modeling or 3D graphics, so I was hoping to find some help for this. There is nothing special about this task, just an identical look of the gum packet, inside and out. There is a set of dividers on the inside that separates the gum into 3 sections that is important for me to have and the way that the packet is opened should be the same. Like I said, it should look exactaly like a normal packet of "Extra" gum. If interested or if you have any questions, please leave a message on here or contact my email: xcountry2287@yahoo.com.

Thanks for your time,

-Extraperson
