Looking for help from someone:

I want to design a wall with holes to filter tea leaves. About 3mm wall thickness in glazed ceramic. I've read design rules but still not clear what min hole diameter is good for this purpose ?

She said it's recommended to do at least 3mm.

Thanks Youknowwho4eva, 3mm hole diameter is good. I'm going to design with it. Are you going to design the same filter ?

I had a design, but haven't printed it yet. Maybe soon, but I have a bunch of things I want printed. Too many designs not enough money.

Financial bottleneck keeps many great designs from becoming great merchandise.
