This is my first print in metal, and I'm really pleased with the result.

I modified the original to allow a cord to be passed through... only the design makes it difficult to insert the intended way (through the two holes on the reverse of the head).

A side effect of this was that I was forced to pass the cord through the larger hole and the neck - the result being that the little guy hangs in a more Gecko-like manner... which I think works out for the better.

Admittedly the cord was on the thick side - 2mm leather - a much thinner cord might work through the intended holes. While waiting for the print to arrive, I've figured out a way to implement larger holes, which I'll try in a future print.

One last point - the SS version does indeed tessellate with the WSF version... but only just... I'd need to take a file to the limbs of the plastic variant to make it fit properly... oh well, I quite like it as a stand alone piece...

Shown here in Antique Bronze Matte.

Very nice! Does it still lie flat on a table (cord removed)? I would like to see a photo of the back ...

Hey thanks!

You can see from the photos how the reverse is designed... the holes are really too small to accept a fat cord (being my first metal print, I was highly aware of printing tolerances), but I got around the issue by threading as shown. I've re-done the reverse in a way which allows greater flexibility I think... I'll order a new print of this soon!

Alas, it doesn't lie flat - but the WSF version is only flat due to the loop being extremely small to the point of being almost unusable.

Thanks! It does hang nicely as a pendant. Having a flat back and hanging nicely may not be possible. It would be cool if you could wear several of them and have them tessellate!

Like this? (apologies for the flash photography... it's late...)

Admittedly, this is the only way the plastic will interface with the metal without a bit of filing. But the concept kind of works...
