So I have a drawing I made in Rhino that is not being accepted for printing. I think it's because it is comprised of a series of surfaces rather than solids. aka it is basically hollow inbetween wall thicknesses. Is anyone willing to look at my drawing. I don't know how to make this work

Thanks!

As long as the surfaces are enclosed you are fine. Are you uploading the rhl? Shapeways doesn't support rhl file type, but you should be able to export an STL (that us none rhino users can view) and try uploading that. If that what you've already done, share that and we can take a look.
