

passionate about creating

Biography Shapeways Management

Peter Weijmarshausen, CEO

Peter Weijmarshausen is the Chief Executive Officer for Shapeways, a co-creation service and community that turns 3D designs into physical objects. Prior to Shapeways, he was the CTO for Sangine, where he and his team designed and developed satellite broadband modems and Director of Engineering at Aramiska, where he was responsible for delivering a business broadband service via Satellite. Earlier in his career, Weijmarshausen worked as ICT manager for Not a Number where he facilitated the adoption of the widely successful open source 3D software Blender. His global expertise is in the fields of business development, e-business, delivering scalable Internet services and website development.

Marleen Vogelaar, CFO

Marleen Vogelaar, CFO, provides expertise and guidance on both a strategic and operational level for Shapeways. Vogelaar's strategic decisions have secured long term value creation and facilitated short term financial goals. Her work for international clients in the field of strategy and corporate finance has provided a solid experience base for her continued leadership and growth of the company. She has improved profitability and productivity in both production, as well as sales and logistics organizations via process improvement programs. She has shown these operational skills during her consulting years, as well as in two positions at a multinational paper corporation.

Robert Schouwenburg, COO

Chief Operating Officer Robert Schouwenburg is responsible for production, customer services, delivery of portal technology (which includes the 3D tools) and manufacturing for Shapeways. In his six years of experience with development and Internet services, Schouwenburg has worked with many international and multi-cultural environments, leading several teams in different countries. One of his chief successes was the development and roll-out of Triple A, an administrative software system for ISPS which covered three facets: order to install, customer service and billing processes. His passion for the Internet and Internet-related services has led him towards the development of IP software and equipment for the satellite communications industry, as well as ventures with a travel portal and an Internet provider that used satellites to deliver their service.
